

CSC 120 Introduction to Creative Graphical Coding, Spring 2021

Professor Patrick Earl, Assignment 4, creating art with moving avatar.

This assignment is due via **D2L Assignment 4** by **11:59 PM on Friday April 30**.

When using Processing on the Kutztown campus Windows computers, make sure to start out **every time** by setting your Processing Preferences -> Sketchbook Location to U:\Processing. The U:\ drive is a networked drive that will save your work and make it accessible across campus. If you save it to your desktop or the lab PC you are using, you will lose your work when you log out. You must save it to the U:\ drive. If you do not have a folder called Processing under U:\, you must create one using the Windows Explorer. Processing Preferences is under the File menu on Windows.

If you have a working avatar from assignment 3 (avatarClass), load it into Processing and **save it as sketch avatarArt**. You will turn in file **avatarArt.pde**. If avatarClass lost points, get it working according to my assignment grade instructions. Please follow any instructions on your assignment 3 grade sheet.

This assignment includes a print screen MS Word files. Therefore, **in addition to file avatarArt.pde, you MUST turn both the avatarArt file and the Word file required to D2L**. If you know how to zip up a folder into a standard .zip format archive, you can do that on the avatarArt folder that contains all files for this project. Otherwise, you must submit each file, one at a time, to D2L.

REQUIREMENTS:

1. 10% Move the background for your sketch to the setup() function.
See my sample code posted in D2L. The name of the file is “**rabbit_avatar_assgn05**”.
2. 10% Call your avatar class and send it at least three arguments. The avatar must move along both the x-axis and the y-axis.
3. 20% Use at least two different types of events to change the direction the avatar moves along the x and y axis. An example of an event would be a mouseClicked() or keyPressed().
4. 20% use another event to change the color or the alpha value of the avatar. You may also change the stroke color or some other characteristic of your avatar using an event.
5. 10% Run your sketch in Processing and capture a Print Screen of the art you created. Paste the Print Screen into a Word document and save it as avatarArt.docx
6. I am spotting you the other 30%.

Drop avatarArt.pde into D2L Assignment 4 avatarArt by 11:59 PM on Friday April 30. Drop both the sketch file and the Word file into D2L. I need them both.
